

Knowledge Factory Talent & Hiring Portal — Product Use Case Document

Overview

The Knowledge Factory Talent & Hiring Portal is a next-generation hiring ecosystem that combines a modern ATS with AI-assisted talent intelligence and a candidate development loop. The platform is designed to help Knowledge Factory:

- Source and discover candidates at scale
- Validate skills using real micro-tasks (not just resume screening)
- Run structured, bias-reduced evaluations
- Provide controlled, constructive feedback to candidates
- Build a long-term talent community (webinars, challenges, hackathons)

Vision & Goals

Vision

Build a transparent, skill-first hiring ecosystem that continuously grows a high-quality talent pipeline.

Primary goals

- Reduce time-to-shortlist and improve shortlist quality
- Increase signal quality via assessments and structured evaluation
- Improve candidate experience through transparency and actionable feedback
- Create a re-entry pathway for rejected candidates after upskilling

- Build an engaged talent community for future roles

Non-goals (initial release)

- Full Learning Management System (LMS)
- Payroll/HRMS onboarding
- Complex workforce planning

User Roles & Permissions

1) Admin

Responsibilities:

- Platform configuration and governance
- Manage RBAC, org settings, templates, and scoring rubrics
- Manage integrations (email, calendar, identity, storage)

Core permissions:

- Full access to all modules, audit logs, and analytics
- Configure hiring stages, assessment templates, and feedback visibility rules

2) HR / Talent Acquisition

Responsibilities:

- Create and publish job postings
- Manage applicant pipeline, scheduling, offers, and communication
- Talent search and outreach

Core permissions:

- Create/edit jobs and hiring pipelines
- View candidate profiles, resumes, assessment results
- Trigger candidate communications and schedule interviews

3) Knowledge Factory Team (Hiring Managers / Program Owners)

Responsibilities:

- Raise hiring requisitions
- Define role requirements and skill frameworks
- Participate in shortlisting and final decision

Core permissions:

- View candidates for owned requisitions/jobs
- Define micro-task assessments and evaluation criteria (within allowed boundaries)
- Approve offers / final decisions (as configured)

4) Evaluators (Interview panel)

Responsibilities:

- Conduct interviews and evaluate micro-task submissions
- Submit structured feedback and scores

Core permissions:

- Access only assigned candidates and sessions
- Submit scoring + moderated feedback fields
- No access to salary/offer details unless explicitly granted

5) Candidates (Students/Graduates/Professionals)

Responsibilities:

- Create profile, apply to jobs, submit assessments
- Track application status
- View controlled feedback and improvement suggestions
- Re-apply after upskilling (when eligible)

Core permissions:

- Access own profile, applications, tasks, feedback (controlled)

- Manage consent, privacy, and data exports as allowed

Module-wise Breakdown

1) Public Career Portal

Purpose:

- Employer branding + job discovery + application entry point

Key capabilities:

- Public pages: About KF, mission, programs, culture, success stories
- Search/browse job openings
- Apply as a student/graduate or experienced candidate
- Login/signup, candidate onboarding

Acceptance criteria:

- Mobile responsive
- SEO-friendly job pages
- Clear call-to-action to apply or join talent community

2) Candidate Onboarding & Profile

Purpose:

- Create a durable candidate identity beyond a single application

Key capabilities:

- Profile creation (email/phone/social login optional)
- Resume upload + portfolio links + GitHub/LinkedIn
- Candidate video pitch upload (reverse hiring)
- Consent management (data retention, communications, sharing)

Data captured (high level):

- Education, skills, projects, experience, certifications

- Work authorization (if relevant)
- Preferences: role types, locations, notice period, availability

3) Resume Intelligence Engine (Bulk Upload + Parsing)

Purpose:

- Convert unstructured resumes into a structured candidate database

Key capabilities:

- Bulk resume upload (PDF/DOC)
- AI-based parsing: education, experience, projects, skills, keywords
- Skill normalization and tagging (e.g., "JS" → "JavaScript")
- Duplicate detection and merge suggestions
- Confidence scoring per extracted field

Operational controls:

- Human review queue for low-confidence parsing
- Version history for resume uploads

4) Candidate Database + Naukri-like Search

Purpose:

- Talent discovery and shortlisting at scale

Key capabilities:

- Search modes:
 - Keyword search (skills, titles, project keywords)
 - Boolean search (AND/OR, exact phrases)
- Filters:
 - Skills (required vs preferred)
 - Total experience, relevant experience

- Education level, college, graduation year
- Location, work mode (remote/hybrid/onsite)
- Availability/notice period
- Assessment performance bands
- Future Fit score range
- Saved searches and alerts
- Candidate tagging and lists (pipeline pools)

5) Job & Requisition Management

Purpose:

- Structure demand intake and job publishing

Key capabilities:

- Requisition creation by Knowledge Factory Team
- Approval workflow (optional)
- Job post creation with:
 - Skills framework (competencies + proficiency levels)
 - Hiring plan (number of positions, timeline)
 - Micro-task assessment plan
 - Evaluation rubric templates
- Multi-channel publishing:
 - Public portal
 - Internal sharing link
- Application intake configuration:
 - Eligibility questions
 - Resume required/optional
 - Video pitch required/optional

6) Applicant Tracking System (ATS) & Pipeline

Purpose:

- End-to-end candidate movement with traceability

Default stages (configurable):

1. Applied
2. Screening
3. Skill Validation (micro-tasks)
4. Interview
5. Evaluation (panel decision)
6. Offer
7. Outcome: Joined / Rejected / Reapply Eligible

Key capabilities:

- Drag-drop pipeline board (role-based visibility)
- Stage entry/exit criteria
- SLA tracking (time-in-stage)
- Automated communications (templates)
- Scheduling integration (calendar) for interviews
- Audit log of decisions and changes

7) Skill-based Micro-task Assessments (Core Differentiator)

Purpose:

- Replace or augment resume-first screening with real work simulation

Types of micro-tasks:

- Coding task (time-boxed)
- Data analysis exercise

- Product/UX prompt
- Writing/communication exercise
- Domain-specific case study

Key capabilities:

- Task library + role-specific templates
- Randomized variants to reduce plagiarism
- Time window and attempt limits
- Anti-cheat signals (basic)
- Manual evaluation + optional auto-checkers

Outputs:

- Task score, rubric breakdown
- Submission artifacts (repo link, PDF, screenshots)
- Evaluator notes (structured)

8) AI-generated Candidate Story (Talent Narrative)

Purpose:

- Summarize candidate strengths, trajectory, and fit signals for faster decision-making

Key capabilities:

- Candidate story sections:
 - Profile summary (2–4 paragraphs)
 - Strength indicators (evidence-based)
 - Growth areas (framed constructively)
 - Role fit reasoning (skills vs job requirements)
 - Risk flags (low confidence, inconsistencies) with explanations
- Traceability: show which resume/assessment signals support statements

- Admin controls to prevent sensitive inference (no demographic guesses)

9) Structured Evaluator Feedback & Scoring

Purpose:

- Standardize decisions, reduce bias, and improve fairness

Rubric dimensions (example):

- Technical competency (0–10)
- Communication (0–10)
- Problem solving (0–10)
- Cultural fit / values alignment (0–10)
- Future Fit (0–10): learning agility, adaptability

Key capabilities:

- Required structured fields (no empty feedback)
- Predefined tags:
 - Strengths
 - Improvement areas
 - Evidence markers (what was observed)
- Calibration prompts (e.g., define what "8/10" means)
- Panel aggregation:
 - Weighted scoring by interview type
 - Conflict resolution workflow if evaluator scores diverge

10) Candidate Feedback Visibility + Improvement Suggestions

Purpose:

- Transparency and continuous improvement loop

Controlled visibility model (recommended):

- Candidates see:
 - Overall outcome
 - Category-level scores (banded or numeric based on policy)
 - Structured strengths and improvement areas
 - AI-generated improvement suggestions and learning resources
- Candidates do NOT see:
 - Raw interviewer comments
 - Internal deliberation notes
 - Sensitive metadata (panel identities if not allowed)

Improvement suggestions engine:

- Maps weak areas to:
 - Skill modules (internal or external resources)
 - Suggested project ideas
 - Practice micro-tasks
 - Community events (webinars/hackathons)

11) Re-application Workflow (Re-entry after Upskilling)

Purpose:

- Convert rejects into future pipeline wins

Key capabilities:

- Outcome states:
 - Rejected (not eligible)
 - Reapply Eligible (with conditions)
- Cooling period policy (e.g., 30–60 days)
- Upskilling evidence submission:
 - New projects, certificates, updated resume

- Optional re-assessment
- Re-application triggers:
 - Candidate requests re-evaluation
 - System recommends relevant roles based on improvements

12) Talent Community Engagement

Purpose:

- Maintain engagement and create a pipeline without constant sourcing spend

Key capabilities:

- Community events:
 - Webinars
 - Challenges
 - Hackathons
 - Office hours
- Candidate segments:
 - Students by graduation year
 - Skill cohorts
 - Reapply-eligible cohorts
- Gamification (optional): badges, leaderboards
- Community-to-application conversion tracking

13) Reverse Hiring (Candidate Video Pitch)

Purpose:

- Let candidates demonstrate communication, initiative, and clarity early

Key capabilities:

- 60–90 second pitch recording/upload

- Optional structured prompts:
 - "What problem did you solve?"
 - "What are you learning right now?"
 - "Why Knowledge Factory?"
- Evaluator scoring rubric for pitch

Detailed Workflows (End-to-End)

Workflow A: Job creation to hire (standard)

1. KF Team creates requisition (role needs, skills, count, timeline)
2. HR reviews and publishes job posting
3. Candidates apply via public portal (profile + resume + optional pitch)
4. ATS stage: Applied → Screening
5. HR uses search and parsing insights to shortlist
6. Assign micro-task assessment (Skill Validation)
7. Candidate submits micro-task; evaluator scores against rubric
8. Schedule interviews; evaluators submit structured scores
9. Panel evaluation + decision
10. Offer creation and release
11. Candidate accepts → Joined

Workflow B: Bulk resume upload to pipeline

1. HR/Admin uploads a resume batch
2. Parsing engine extracts structured fields + skill tags
3. Duplicate detection proposes merges
4. Candidates appear in the database (unapplied pool)
5. HR runs Naukri-like search and builds a shortlist

6. HR can invite candidates to apply for a specific job

Workflow C: Candidate feedback + reapply loop

1. Candidate is marked Reapply Eligible with improvement plan
2. Candidate views controlled feedback and suggestions
3. Candidate upskills and uploads evidence
4. Candidate requests re-evaluation or applies to a recommended role
5. System optionally assigns a short re-assessment
6. Candidate re-enters pipeline at Screening or Skill Validation based on policy

Workflow D: Community engagement to hiring

1. Candidate joins talent community without applying
2. Candidate participates in challenge/hackathon
3. Performance signals update candidate profile + Future Fit score
4. HR/KF Team discovers candidate via search filters
5. Candidate is invited to apply or directly assigned a micro-task

Future Fit Scoring (Learning Ability + Adaptability)

Purpose:

- Predict long-term success beyond current skills

Inputs (examples):

- Micro-task improvement over attempts
- Time-to-learn signals (completion speed + quality)
- Community participation consistency
- Interview rubric: growth mindset, adaptability scenarios

Outputs:

- Future Fit score (0–10) + explanation summary

- “High potential” flag for pipeline building

Guardrails:

- Explainability required; no opaque scoring
- Periodic bias audits and calibration

Security, Privacy, and Compliance Considerations

- RBAC enforced at API + UI layer
- Data minimization: collect only what’s needed
- Candidate consent and retention policies
- Redaction of evaluator free-text; use structured tags where possible
- Audit logs for:
 - profile access
 - decision changes
 - feedback publishing
- Secure file storage for resumes and videos

Analytics & Reporting

Operational dashboards:

- Funnel metrics by job and cohort
- Time-to-fill, time-in-stage SLAs
- Drop-off points in assessments
- Offer acceptance rate

Quality dashboards:

- Assessment correlation with interview outcomes
- Evaluator calibration variance
- Reapply conversions and success rate

- Community-to-hire conversion

Key Differentiators

- Skill-first micro-task assessments integrated into ATS
- AI candidate story with evidence traceability
- Structured evaluator scoring and calibration
- Controlled feedback transparency for candidates
- Reapply workflow to convert rejects into future hires
- Talent community that continuously feeds the pipeline
- Reverse hiring via candidate video pitch
- Future Fit scoring for long-term potential

Expected Outcomes

For Knowledge Factory:

- Higher quality hires with better role fit
- Reduced hiring cycle time and manual screening load
- Strong long-term talent pipeline and employer brand

For candidates:

- Clear, fair evaluation signals
- Actionable improvement suggestions
- A pathway to re-enter after upskilling

Implementation Notes (High-level)

Recommended phased rollout:

- Phase 1: Career portal + ATS + basic parsing + job management
- Phase 2: Micro-tasks + structured evaluator scoring + candidate story
- Phase 3: Candidate feedback visibility + reapply workflow

- Phase 4: Community engagement + reverse hiring + Future Fit maturity
