Projects

Diabetes Risk Predictor

- Implemented a diabetes risk prediction system using Python and Flask to generate reliable risk outcomes from user-provided medical inputs.
- Utilized JSON-based data handling to manage dynamic inputs and produce structured, consistent responses.
- Organized application logic in Python to improve maintainability and support future enhancements.

ExpenseSync – Personal Finance Tracker

- Implemented a secure expense management system using Flask and SQL to efficiently store, categorize, and retrieve user transactions.
- Developed backend routes using Python and Flask to process expense entries and generate monthly summaries, improving data organization.
- Designed analytical features using server-side data processing to produce category-wise and monthly spending insights.

Recipe Sharing Platform

- Implemented a recipe management application using Python and Flask to allow users to add, view, and manage recipes efficiently.
- Utilized database integration to store recipe details and retrieve them dynamically based on user interactions.
- Structured application logic to ensure smooth data flow and maintain clear separation of functionality.
